# OLYMPIC MEDAL COUNT BY COUNTRY

Data Analysis using Python

**SUBMITTED BY: MARIA ANN MATHEW**
**COURSE: AI-ML PROJECT**
**ORGANIZATION: GLOBAL NEXT CONSULTING**

# INTRODUCTION

- Olympics is the world’s biggest sports event
- Countries compete to win medals
- Medal counts show national performance
- Data analysis helps identify trends and top countries

# OBJECTIVES

- Identify top performing countries
- Analyze medal trends over years
- Compare country performances
- Visualize medal distribution

# DATASET INFORMATION

**Dataset Name:** Athlete Events Dataset

**Source:** Kaggle

**File:** athlete_events.csv

**Important Columns:**

Team (Country)

Year

Sport

Medal (Gold/Silver/Bronze)

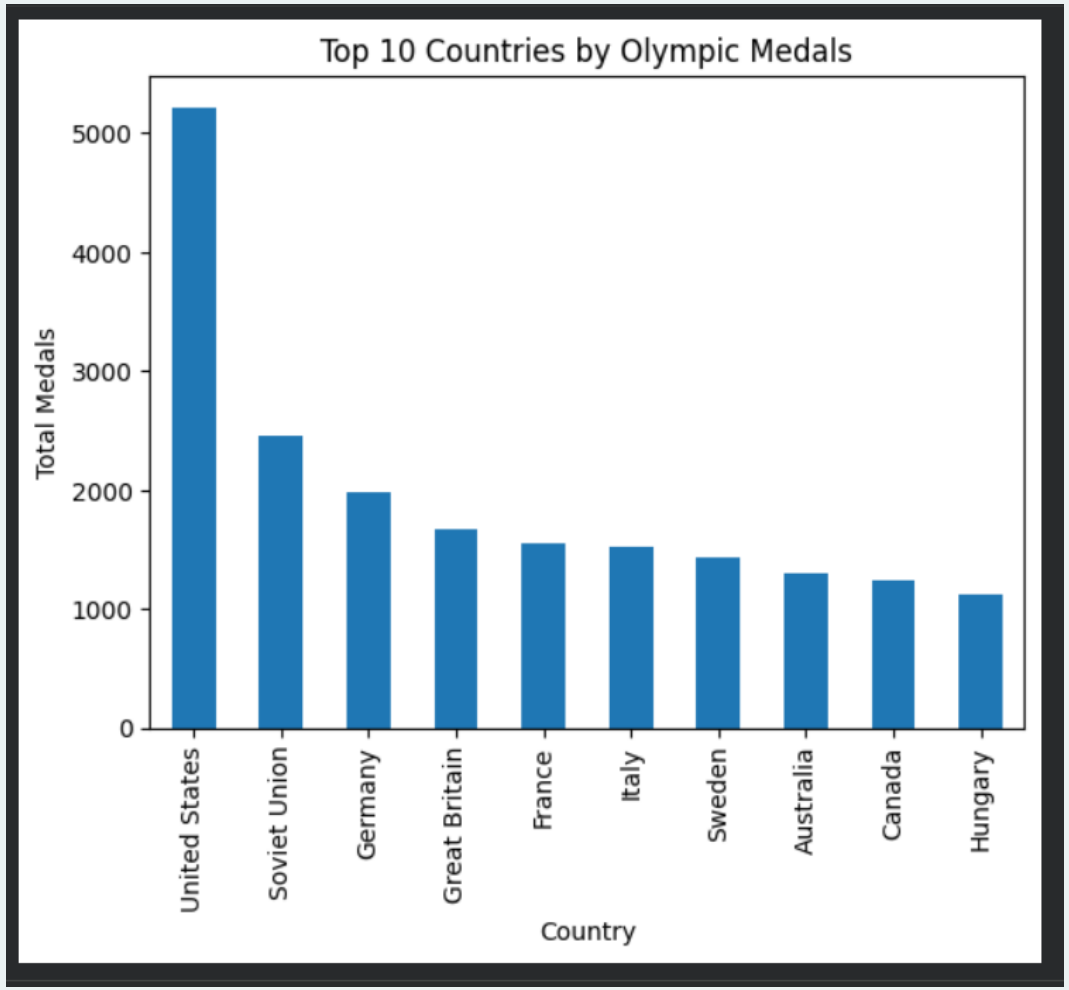
# TOOLS & TECHNOLOGIES

- Python
- Pandas
- Matplotlib
- Google Colab

# DATA PREPROCESSING

- Loaded CSV file
- Removed missing medal values
- Grouped data by country
- Counted medals

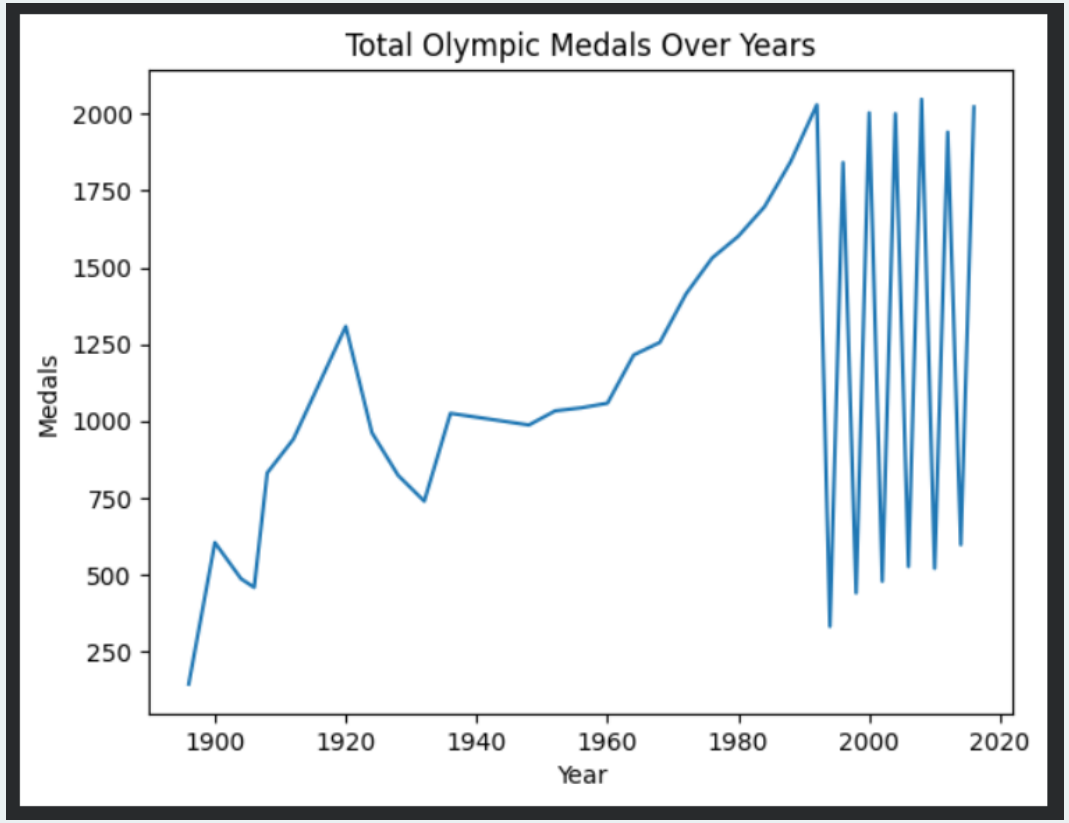
# **Top 10 Countries** (Bar Chart)



**Observation:**

- USA dominates medal count
- European countries perform consistently
- Some countries show rapid growth

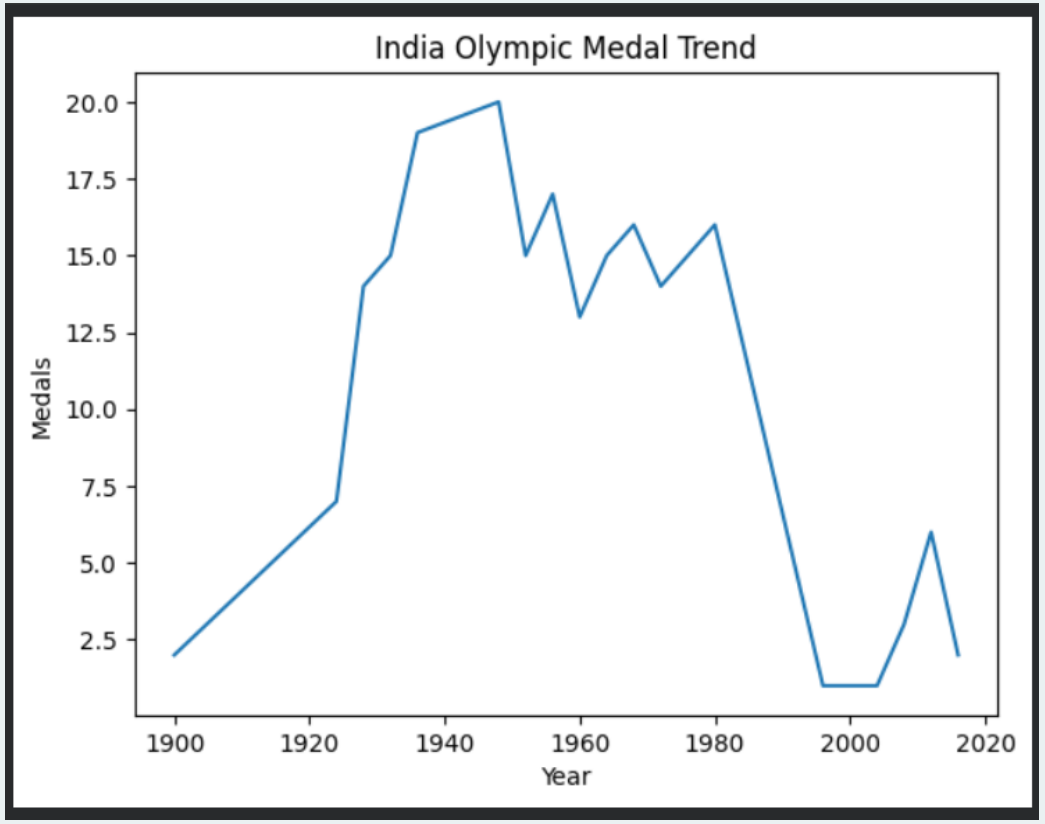
# MEDAL TREND OVER YEARS



**Observation:**

- Medal counts increase over time
- Participation increased
- Modern Olympics have more events

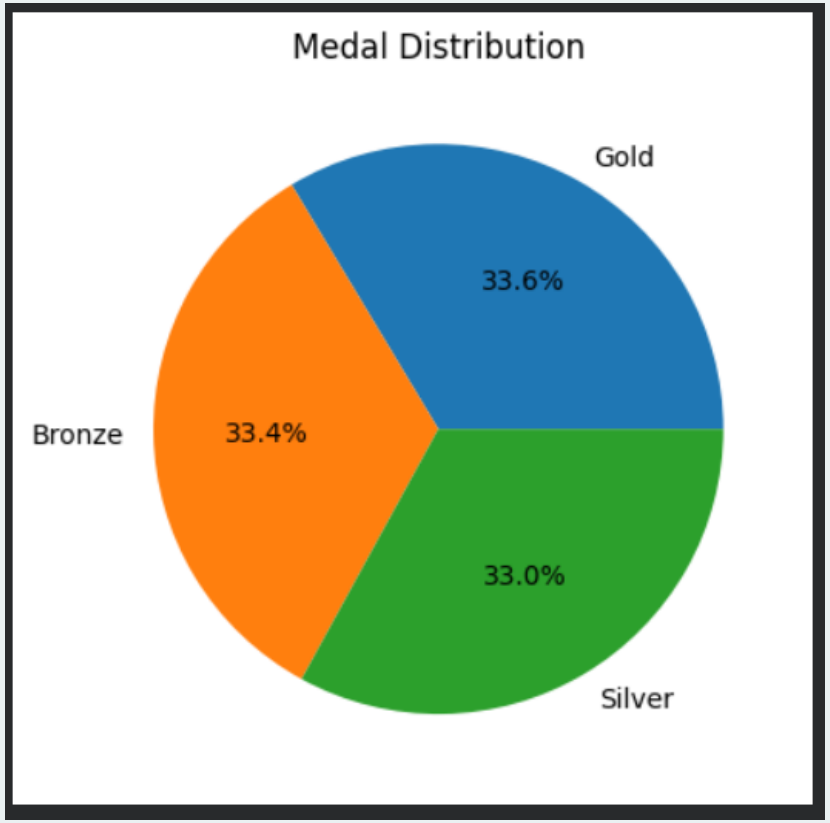
# INDIA PERFORMANCE



**Observation:**

- India shows gradual improvement
- Significant growth after 2000
- More medals in recent Olympics

# Medal Distribution



**Observation:**

- Gold, Silver, Bronze distributed evenly
- Slightly more Bronze medals overall

# KEY INSIGHTS

- Usa is top performing country
- Medal counts increased over time
- Emerging countries improving
- India performance improving gradually

# CONCLUSION

- Olympic data shows global sports trends
- Data visualization helps understand performance
- Countries investing in sports perform better
- Future Olympics may show new leaders

# Thank you
